

## Wool Yarn

### Product Details:

**Dimensions:**

Weights: 1/175 - 6/6000  
Colours: Custom matchings  
Treatments: Insect resist  
UV stabilisers  
Aviation FR compliance  
Twist set  
MOQ: 1200kg  
Packed as: Cones or hanks

*All of our woollen spun yarns are made of 100% natural fibre, meaning they are fully biodegradable and contribute no micro-plastic pollution.*

*Wool yarn traps odours, dust and harmful VOCs, it is also long-lasting, naturally flame-retardant and the perfect choice for the family home, or fast paced commercial environment.*

### Features:

**Biodegradable:**

Versatile designs can be created for any architectural project. Solid shades in bright and bold colours, natural belnded heathers, or unique twists, highlights and scribble effects all could add style and character to your flooring.

**Acoustic Dampaning:**

Wool carpet is un-matched when it comes to acoustic dampening and noise control. For quiet and comfortable spaces designed to be lived in choose wool.

**Moisture Regulation:**

Wool breathes, literally! Able to absorb up to 30% of its weight in water vapour without feeling wet, wool yarn will take in excess humididty and release it in the future when ambient humidity drops, acting like lungs for your home. But, wool is hydrophobic for liquid water meaning it won't readily absorb liquid water making natural stain prevention a breeze.

**Local:**

Wool fibre are both sourced from New Zealand farms and is processed and manufactured in Canterbury. Wool Geotextile is not subject to overseas supply chain issues, foreign exchange rates or overseas production limitations. The production and harvest is also subject to New Zealand labour and environmental regulations.
